How is Brexit Polarized on YouTube?

Talkin' about Post-API...

...what's best to study personalization / polarization / radicalization etc ?

YouTube API → static set of “*related videos*” curated *by YouTube* itself, *somehow* related to recommendation

youtube.tracking.exposed → dynamic set of *actual* videos being *really* recommended to *real* users

Methodology I: Data Collection

Protocol:

→ total of 2,000 (non-unique)
related videos retrieved

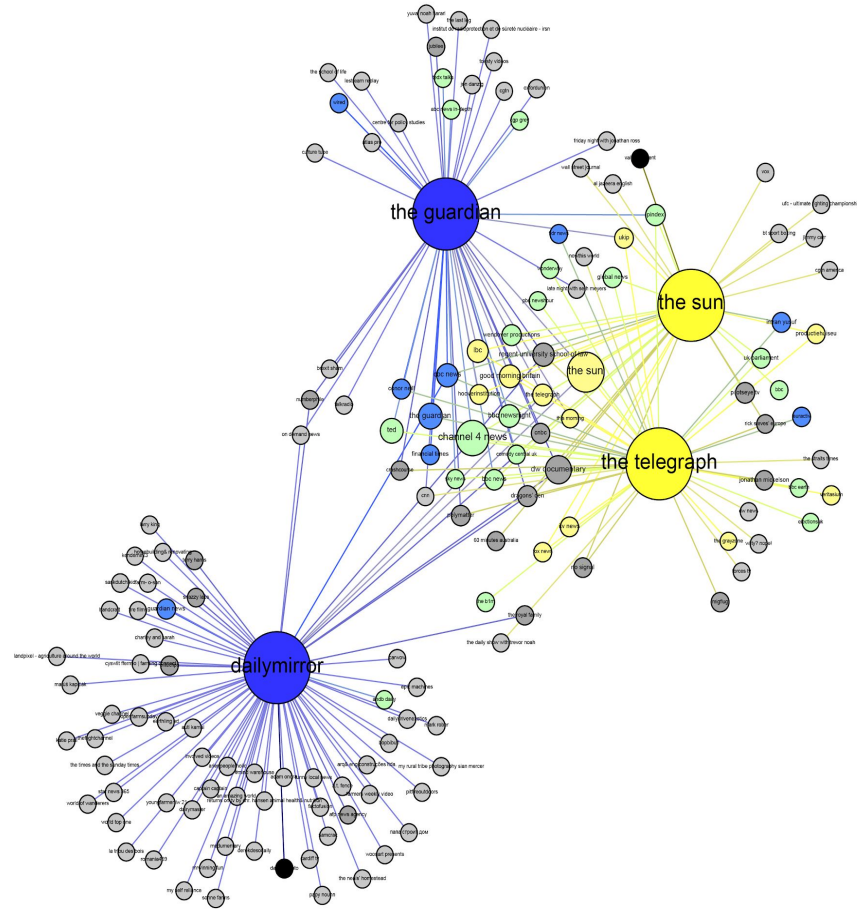

Methodology II: Analysis & Findings

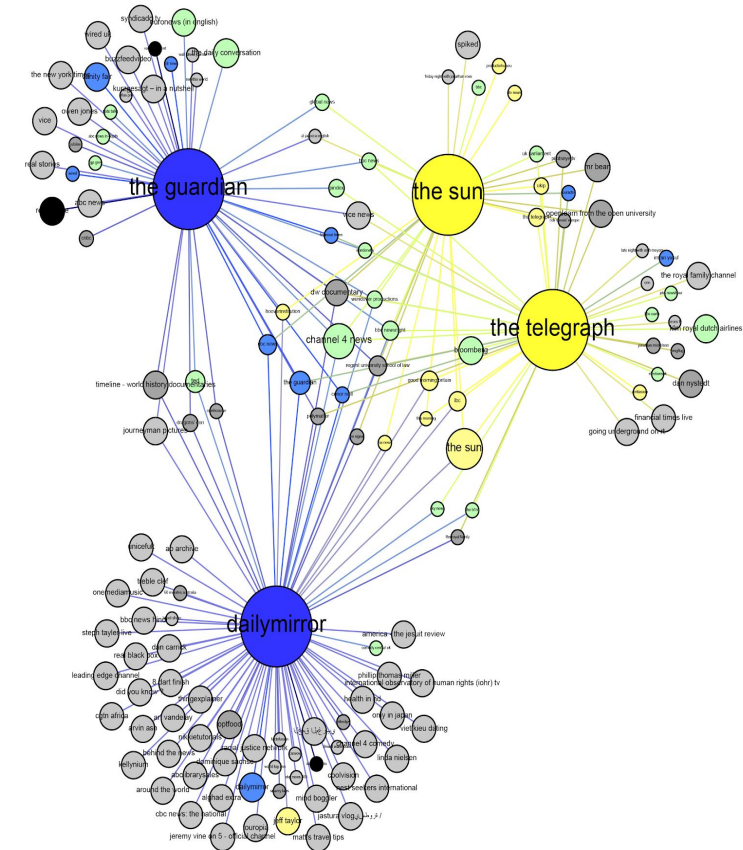

Network at time 0 vs. Network at time 5

first step

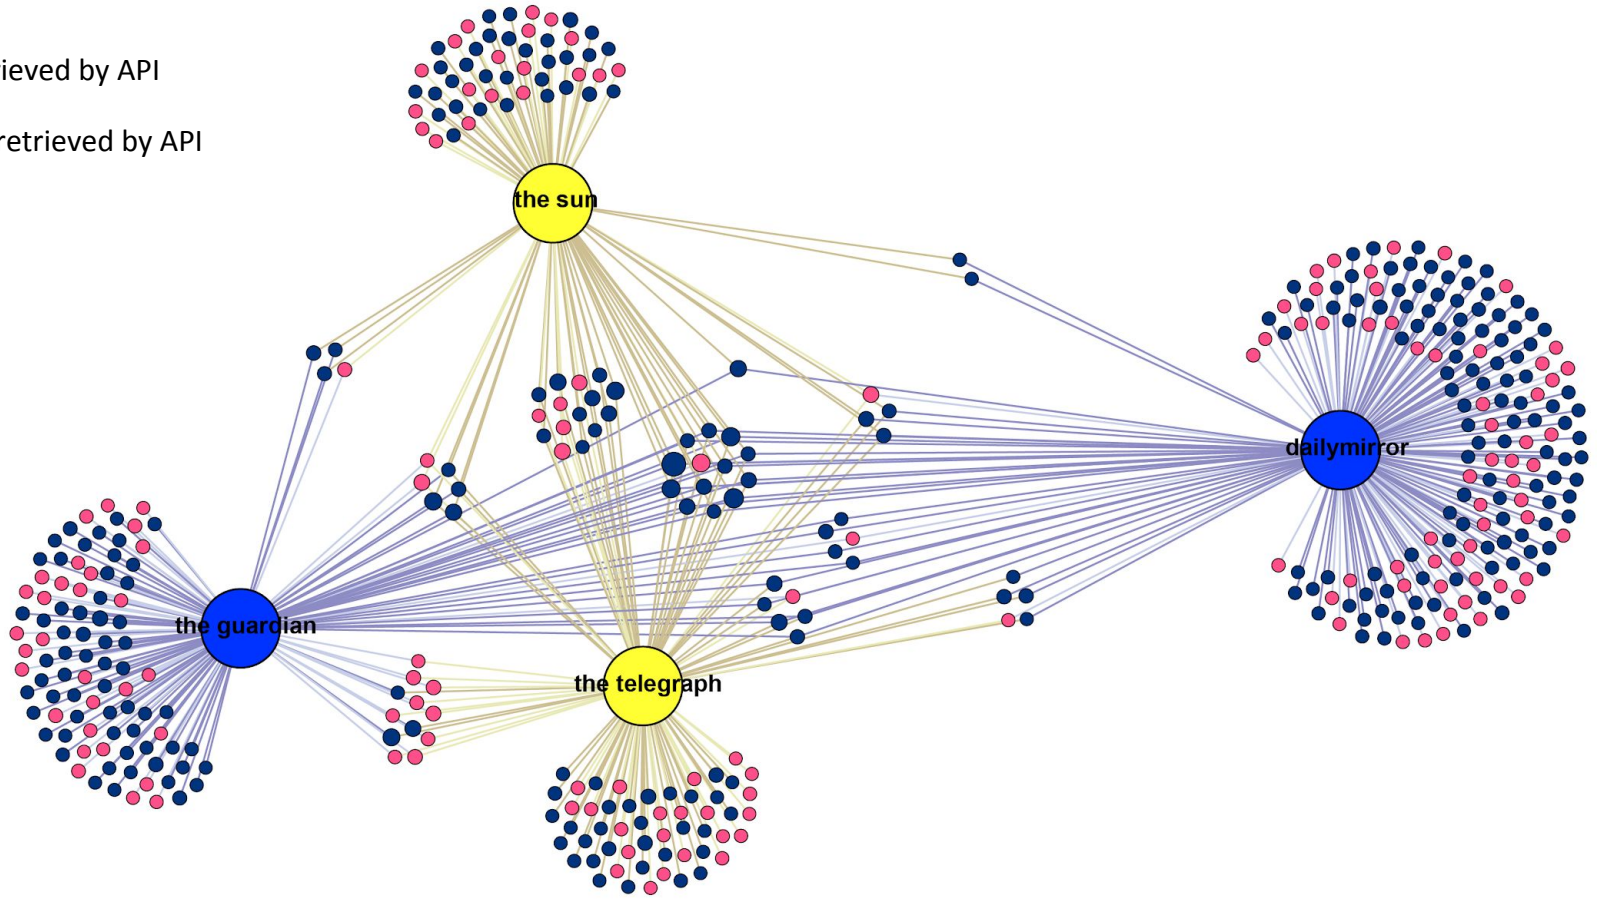

last step

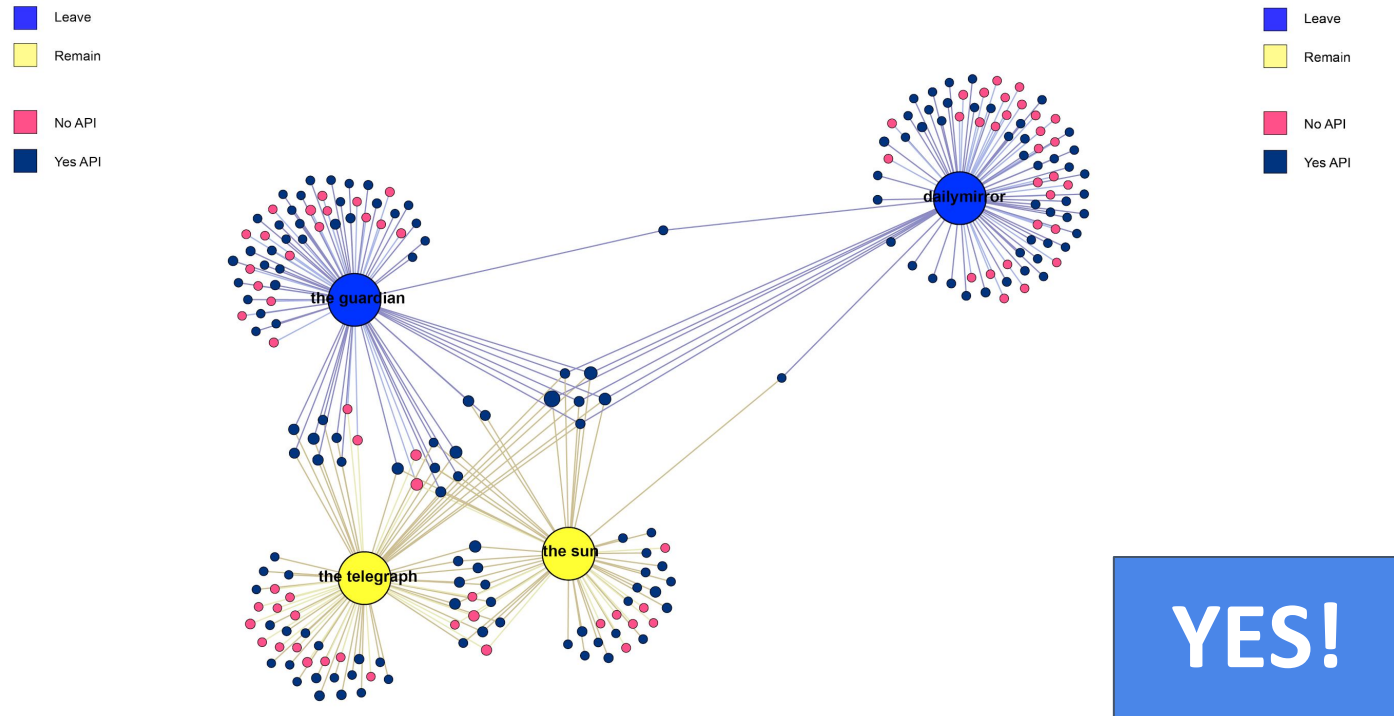

Network of all videos' recommendations categorized by Brexit stance

- Remain
- Leave
- Retrieved by API
- Not retrieved by API

IS THERE STATISTICAL EVIDENCE FOR OUR RESULTS?

p-value = 0.00007

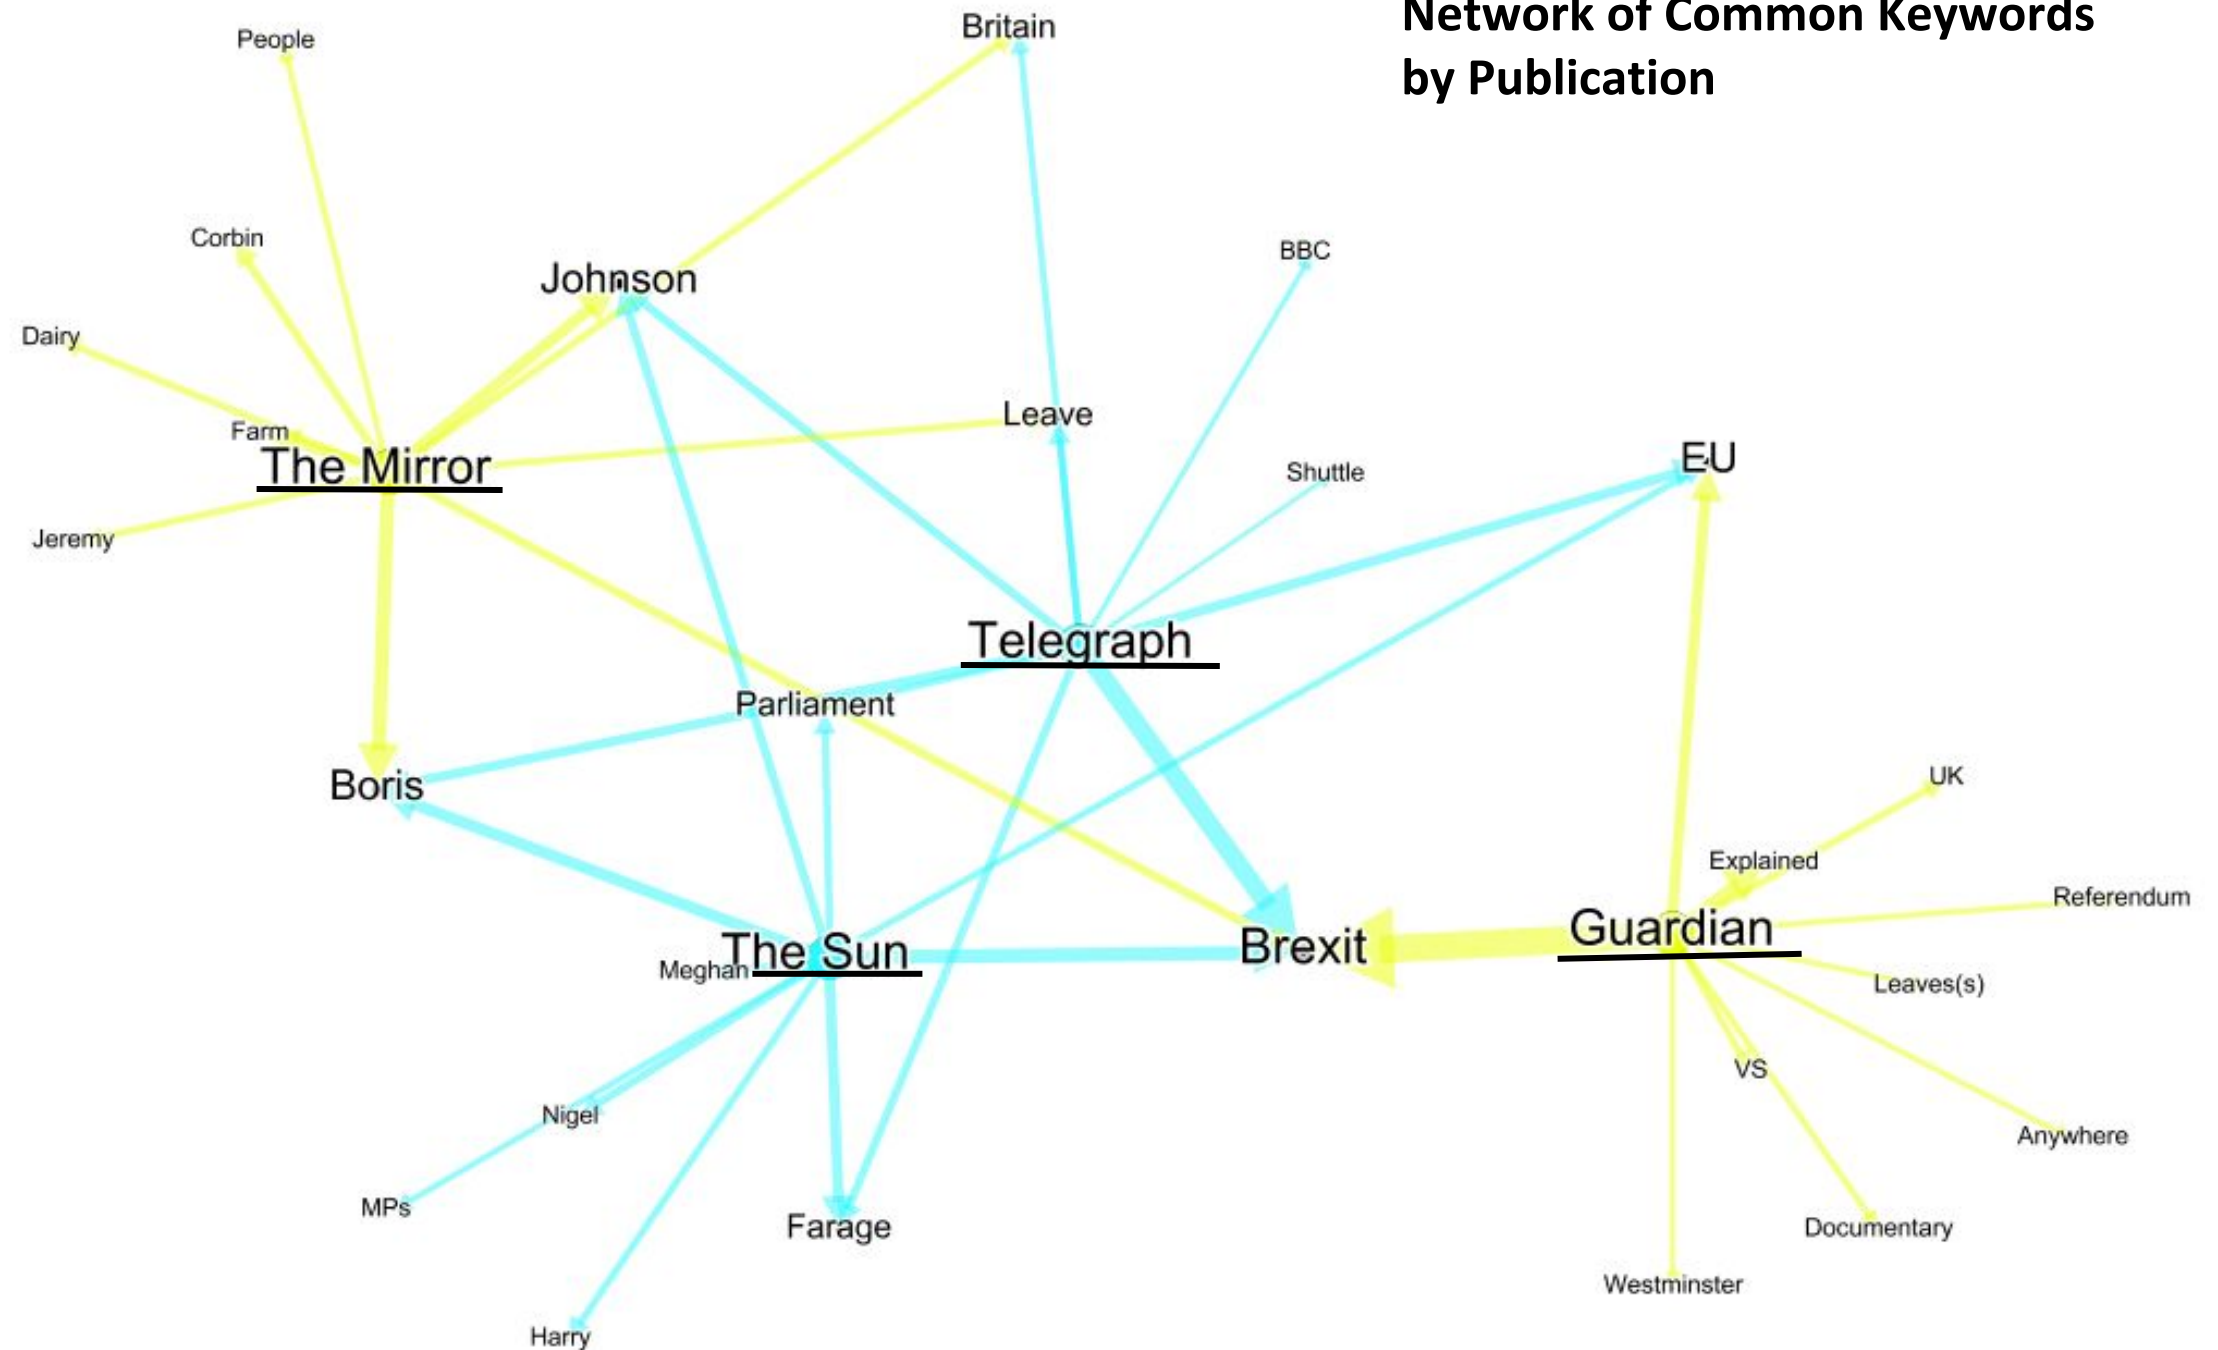

MEAN AFTER 5 VIDEOS
VISUALIZATIONS
17%

Position and Genre of the Channels

Network of Common Keywords by Publication

Conclusion

- There is **evidence of progressive polarization** around Brexit on YT (more on the LEAVE side)
- The LEAVE / REMAIN **content** bubbles **rarely converge**
- **Mainstream media** is recommended with **greater regularity** compared to native digital channels (starting from mainstream media...)
